optSingleCrit

opt Single Crit

Description

The optSingleCrit function selects the Pareto front designs that optimizes the individually considered criteria.

Usage

optSingleCrit(ar)

Arguments

ar

A list as the ${\tt megaAR}$ returned by the ${\tt runTPLS}$ function.

Value

A list whose i-th element corresponds to the solution that optimizes the i-th criterion in criteria. The solution is a list of two elements:

- score: A vector containing the scores for every element in criteria.
- solution: The design matrix.
